

The Solar System Song

Warren Phillips
Copyright 2002

**The sun's a star in the Milky Way spinnin' with the galaxy
And the planets orbit 'round the sun with great velocity.
Mercury, Venus, Earth and Mars, the inner planets go
Jupiter, Saturn, U-ran-us, Neptune, NOT Pluto!**

**The Solar System, eight planets 'round the sun
Ro-tating and revolving too
In orbits one by one.**

**Now the planets they have satellites – but we just call them moons
And comets made of rock and ice could be harbingers of doom
Ast-er-oids are rocks and dust that are floating round the sun
If gravity pulls them in to earth, a meteor they become.**

**The Solar System, eight planets 'round the sun
Ro-tating and revolving too
In orbits one by one.**

**Well scientists using telescopes have learned we're not alone
other stars in the galaxy have planets all their own.
And other galaxies have stars with planets going 'round
And maybe life exists there - just waiting to be found!**

**The Solar System, eight planets 'round the sun
Ro-tating and revolving too
In orbits one by one.**

**The sun's a star in the Milky Way spinnin' with the galaxy
And the planets orbit 'round the sun with great velocity.
Mercury, Venus, Earth and Mars, the inner planets go
Jupiter, Saturn, U-ran-us, Neptune, NOT Pluto!**

**The Solar System, eight planets 'round the sun
Ro-tating and revolving too
In orbits one by one.**
